A JAIPUR-BASED CONSTRUCTION & PROJECT DELIVERY COMPANY

Our Story & Mission

Our story. EmpireTech Global started in Jaipur as a real estate and construction company. Our roots are in hands-on civil engineering. Today, we focus on one clear goal: building factories, warehouses, schools, colleges, and hospitals — the kind of buildings where strong structure, proper approvals, and on-time delivery matter most.

Our mission. We want to be the one partner you need for large projects. From the first site visit to the final handover — design, approvals, and construction — we manage it all. So you get a building that is safe, strong, and ready on time.

"We build what industries and institutions depend on — engineered right, cleared right, delivered on time."

Founder-Led

Directors Ashwil Bhupesh (BTech, IIT Delhi) and Devdeep Singh (BTech, Civil Engineering) personally oversee every project.

Based in Jaipur

We serve Rajasthan and the industrial belts near NCR.

Compliance First

We check the rules that apply to your project before we design anything.

A JAIPUR-BASED CONSTRUCTION & PROJECT DELIVERY COMPANY

Team & Core Values

Structural engineers, MEP consultants, procurement specialists, and site supervisors — we treat every build as an engineering problem first, not just a construction job. A dedicated project manager owns cost, schedule, and compliance on every project.

Trust

We keep our commitments.
No renegotiating terms
halfway through the project.

Transparency

Open-book cost lists. No
hidden charges or surprise line
items.

Promise

What we agree to build is
exactly what we deliver.

On-Time

We track every stage of the
timeline, down to the day.

Within Budget

Cost control is part of every
design decision we make.

One Point of Contact

One project manager. One
number to call. No passing
you between teams.

STRUCTURAL · MEP · PROCUREMENT · SITE SUPERVISION

What We Build

We work on five kinds of buildings. Each one has its own rules and needs — and we plan for them from day one.

Industrial Facilities

Factory sheds and manufacturing units, built to handle heavy loads, good airflow, and long daily use.

Warehouses & Logistics Parks

Open, clear-span storage spaces built for easy loading, strong floors.

Schools

Classrooms, labs, and campuses, built to meet state education norms.

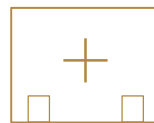

Colleges

Academic blocks and hostels, built to UGC/AICTE rules and accessible for everyone.

We also build hospitals — from small diagnostic blocks to full hospital campuses — always with the same focus on getting it right and getting it approved.

ENGINEERED RIGHT · CLEARED RIGHT · DELIVERED ON TIME

Design, Engineering & Systems

Before we lay a single brick, we plan the drawings, the structure, and the systems your building will run on.

Architectural Drawings

Site plans, floor plans, and elevations — ready for authority approval, for any building type.

Structural Engineering

Design that follows Indian safety codes (IS 456 / IS 800 / IS 1893), for the load and span your building needs.

Quantity & Cost Estimation

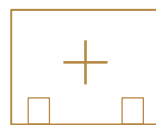

A full, item-by-item list of materials and costs — for civil, finishing, and system works.

Material & Sourcing Advice

Guidance on brand, grade, and bulk-rate sourcing, to help control your material costs.

IS 456 · IS 800 · IS 1893 · FIRE & LIFE-SAFETY CODES

Why EmpireTech Global

01 One Team, One Owner

One team handles your project from start to finish. No blame-shifting between architect, builder, and supplier.

02 Rules Checked Early

Fire safety, structure, and other approvals are planned at the design stage — not fixed later when an inspection fails.

03 Engineering-Led Design

Our structural and electrical/plumbing design follows Indian safety codes, sized to what your building actually needs.

04 Clear, Open Costing

You get a full, item-by-item cost list before work starts. You always know where the money goes.

05 On-Time, By Stage

A dedicated project manager tracks each stage of work and keeps your build on schedule.

06 Built to Run, Not Just to Look Good

We design for how your factory, hospital, or campus will work every day — not just how it looks on handover day.

SINGLE-POINT ACCOUNTABILITY, START TO FINISH

Our End-to-End Process

One team manages every stage of your project — from the first site visit to the final handover.

Open Costs, No Surprises

With EmpireTech Global

- ✓ Full, item-by-item cost list before work begins
- ✓ Budget shared stage by stage
- ✓ Material choices shown to you openly
- ✓ One person to call for any cost question

Typical Fragmented Contracting

- Different, uncoordinated vendors for design and build
- Cost increases show up after work has started
- Material changes made without telling you
- No one person responsible when timelines slip

Safety & Quality, Built In

Safe Site, Always

Every worker follows PPE and safety rules on site.

Regular Inspections

We check the work at every stage of building.

Ongoing Training

Site staff and contractors get regular safety training.

National Standards

All work follows national construction and safety codes.

Early Risk Checks

We flag risks early, before they turn into problems.

Independent Audits

Work is checked against our own standards before sign-off.

COST CONTROL · SITE SAFETY · QUALITY SIGN-OFF
